§ 864.7340

(b) Classification. Class II (performance standards).

[45 FR 60615, Sept. 12, 1980]

§864.7340 Fibrinogen determination system.

- (a) Identification. A fibrinogen determination system is a device that consists of the instruments, reagents, standards, and controls used to determine the fibrinogen levels in disseminated intravascular coagulation (non-localized clotting within the blood vessels) and primary fibrinolysis (the dissolution of fibrin in a blood clot).
- (b) Classification. Class II (performance standards).

[45 FR 60615, Sept. 12, 1980]

§864.7360 Erythrocytic glucose-6-phosphate dehydrogenase assay.

- (a) Identification. An erythrocytic glucose-6-phosphate dehydrogenase assay is a device used to measure the activity of the enzyme glucose-6-phosphate dehydrogenase or of glucose-6phosphate dehydrogenase isoenzymes. The results of this assay are used in the diagnosis and treatment of nonspherocytic congenital hemolytic anemia or drug-induced hemolytic anemia associated with a glucose-6-phosphate dehydrogenase deficiency. This generic device includes assays based on fluorescence. electrophoresis. methemoglobin reduction, catalase inhibition, and ultraviolet kinetics.
- (b) Classification. Class II (performance standards).

[45 FR 60616, Sept. 12, 1980]

§ 864.7375 Glutathione reductase assay.

- (a) *Identification*. A glutathione reductase assay is a device used to determine the activity of the enzyme glutathione reductase in serum, plasma, or erythrocytes by such techniques as fluorescence and photometry. The results of this assay are used in the diagnosis of liver disease, glutathione reductase deficiency, or riboflavin deficiency.
- (b) Classification. Class II (performance standards).

[45 FR 60616, Sept. 12, 1980]

§864.7400 Hemoglobin A2 assay.

- (a) Identification. A hemoglobin A_2 assay is a device used to determine the hemoglobin A_2 content of human blood. The measurement of hemoglobin A_2 is used in the diagnosis of the thalassemias (hereditary hemolytic anemias characterized by decreased synthesis of one or more types of hemoglobin polypeptide chains).
- (b) Classification. Class II (performance standards).

[45 FR 60617, Sept. 12, 1980]

§864.7415 Abnormal hemoglobin assay.

- (a) *Identification*. An abnormal hemoglobin assay is a device consisting of the reagents, apparatus, instrumentation, and controls necessary to isolate and identify abnormal genetically determined hemoglobin types.
- (b) Classification. Class II (performance standards).

[45 FR 60618, Sept. 12, 1980]

§864.7425 Carboxyhemoglobin assay.

- (a) Identification. A carboxyhemoglobin assay is a device used to determine the carboxyhemoglobin (the compound formed when hemoglobin is exposed to carbon monoxide) content of human blood as an aid in the diagnosis of carbon monoxide poisoning. This measurement may be made using methods such as spectroscopy, colorimetry, spectrophotometry, and gasometry.
- (b) Classification. Class II (performance standards).

 $[45~\mathrm{FR}~60619,~\mathrm{Sept.}~12,~1980]$

§864.7440 Electrophoretic hemoglobin analysis system.

- (a) *Identification*. An electrophoretic hemoglobin analysis system is a device that electrophoretically separates and identifies normal and abnormal hemoglobin types as an aid in the diagnosis of anemia or erythrocytosis (increased total red cell mass) due to a hemoglobin abnormality.
- (b) Classification. Class II (performance standards).

[45 FR 60620, Sept. 12, 1980]
